Photo shows optional powder coated finish

A range of high quality player and official shelters available in different sizes to suit all sports.

Manufactured from high quality aluminium, the shelters are finished with a durable transparent polycarbonate, and long life aluminium seats.

The systems are freestanding and can be bolted in place if required. They also can be supplied with an optional foot plate to ease wear on the substrate if placed over natural grass.

Systems come in a modular demountable design for easy transport and possible extension in the future if required, and include a special flow through feature in the design to allow air to circulate to increase player comfort in hot condition.
