

The Top Roll curtain is an elegant, sleek solution for partitioning areas in a facility.

The system is completely free of troublesome retractor cables, meaning the curtain is sleek, clean and without trip points in comparison to older designs.

The curtain retracts onto a top roll, and the motor is full concealed within the curtain adding to the aesthetic appeal. The system is equipped with instant reversing winch operation to prevent burnout if direction is immediately changed. Once retracted, it stores compactly and discretely, and can easily be housed within a bulkhead for 'invisibility'.

These systems are mounted to a structural beam.

They are extremely low maintenance and a wide range of colours are available both in rip stop vinyl, and in vinyl coated mesh for the transparent section.
