

Peak Fold dividing curtains are an innovative solution for facilities with low roof heights, and an apexed ceiling.

The curtain is an Essentials style fold up design, and “folds” in the middle as it retracts to allow it to fold to mimic the slope of the ceiling.

The system typically comes with approx 2 m of opaque vinyl at the base, and vinyl coated mesh at the top, however can be converted to all vinyl, or all mesh configurations if required.

The system is operated by key switch with a micro-switch limiting controller to automatically determine heights when raised and lowered.

Curtains are facility specific. Please contact us for more information.
