

- 
- The diagram illustrates the BBESR basketball system, featuring a central vertical mast with a triangular support structure at the top. A horizontal arm extends from the mast, holding a rectangular backboard with a basketball hoop and net. Red lines connect various features of the system to descriptive text blocks.
- + Incorporates triangular mast support for resistance to sway
 - + Can fold forwards, backwards or sideways
 - + Engineered to allow flexibility in installation and a quality product at a lower cost.
 - + Includes mechanical locking arm to hold system in position (not gravity reliant)
 - + Maximum of 9m mounting height on standard system
 - + Includes a full size 50mm reinforced fibreglass backboard for improved strength and ball rebound
 - + Direct mount goal connection to structural centre mast for ultimate strength
 - + FIBA certified
 - + Designed for use in schools, recreational and community centres
 - + Upgrades can include spring-loaded rings, backboard padding, height adjustment, safety straps and electric or manual retraction
 - + Custom configurations require longer lead times and additional costs.
